

Introduction

The module is developed based on the CSK4002 chip and can be widely used in smart home, smart home appliances, and emerging consumer electronics industries.

Voice interaction module interface description

3. Wake-up word

The module's built-in wake word is "Hi, Yahboom".

After the module is woken up, other command words can be recognized later. Within 20 seconds of waking up, you don't need to wake up again, just say the command word directly.

4. Communication protocol

Please check Voice module communication protocol-en.pdf file.
